Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see pages 1-3, filed 4/19/2006, with respect to Karg et al have been fully considered and are persuasive. The previous office action (final rejection) of 8/24/2005 has been withdrawn. Applicant argued that the prior art of Karg et al does not teach a second channel exclusive of the first channel. Upon review, the examiner has affirmed applicant and noted that the prior art of Hennells (US 3,034,527) teaches a check valve (diverter valve) wherein Figs. 1 and 2 illustrates channels 18 are exclusive of channels 66, 38, and 20.

It is noted that applicant makes several arguments regarding the intended use of the valve in a semiconductor manufacturing environment, but fails to claim a semiconductor with a diverter valve therein, nevertheless the claimed invention is to a diverter valve which is a means of fluid transport that has a plethora of industrial applications.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 12 is rejected under 35 U.S.C. 102(b) as being anticipated by W.E. Hennells (US 3,034,527) teaches a safety check and exhaust valve (diverter valve) comprising a housing (valve chamber 24) see Figs. 1 and 2 wherein the bottom and top surface. Regarding the type of fluid used to move the internal top surface, the apparatus is to a diverter valve which is inherently capable of using water and/or nitrogen.

Art Unit: 1763

Regarding claim 13: If the flow is left to right, the plurality of outlet tubes is depicted in Figs. 1 as 20 and 36.

Regarding claim 14: Valve chamber 38 anticipates an aperture.

Regarding claims 15-20: The structure of the valve of Hennells comprises the structure as depicted in Figs. 1 and 2 to perform the movement recited via the sliding piston 22.
